

**A Novel Means for Deterring Nuclear Terrorism: The Case of DPRK**  
**2007 PPNT Winter Seminar**  
**1–2 February 2007**  
**Washington, DC**

**A program of the UC Institute on Global Conflict and Cooperation  
funded by the National Science Foundation (NSF)**

**Overview**

This year's Public Policy and Nuclear Threats winter seminar takes place in Washington, D.C., the heart of the policy world and follows up on successful student-led conferences at UC Berkeley (2005) and UCLA (2006). Much of this year's discussion will focus on the recent nuclear tests of the Democratic People's Republic of Korea as a case study. Panel discussion topics include how to prevent emerging nuclear states from transferring nuclear materials to other states or to terrorists and an exploration of an international nuclear forensics regime as a model for cooperative deterrence.

Public Policy and Nuclear Threats is funded by the National Science Foundation's Integrative Graduate Education Research and Traineeship (IGERT) program. The fellows and associates are young nuclear experts trained on both the technical and social science/policy sides. They come from a diverse set of academic disciplines in the physical and social sciences on the University of California campuses and range from those who have recently entered graduate school to those who have completed their graduate work and moved on to industry and academia.
