This joint workshop led by the Stockholm International Peace Research Institute (SIPRI) and the University of California Institute on Global Conflict and Cooperation’s (IGCC) Project on the Study of Innovation and Technology in China (SITC) examines China’s high-technology trade and investment with major foreign partners, especially the European Union, the Asia-Pacific region, Middle East, and Latin America. Issues that will be covered include the nature of China’s technology trade with other major industrializing countries such as Russia and Brazil, scientific, investment, and trade interactions between China and the EU, evolving export control regimes, and the dual-use and military implications of this high-technology trade.
